

Project Definition:

WebGIS Development Bootcamp Batch 3

Informasi Project

Nama Project WebGIS:

TaniSight: A Geospatial Intelligence for Modern Agriculture

Nama Peserta:

Damar Panoto

1. Ide Project

TaniSight is a geospatial farm intelligence platform that centralizes agricultural data, field operations, and analytics into a single system, enabling precision agriculture, operational excellence, and data-driven decision-making for medium to large-scale farming enterprises.

2. Permasalahan yang Diangkat

Indonesia's agricultural productivity remains below that of many leading agricultural nations, with lower crop yields per hectare and inefficiencies in farm operations caused by limited data-driven decision-making and inadequate digital infrastructure.

TaniSight leverages Geospatial Intelligence and precision agriculture technologies to transform farm data into actionable insights. Enables farmers to perform optimum management practices, improve operational efficiency, reduce costs, increase yields, and maximize profitability across agricultural operations.

3. Target Pengguna

Siapa pengguna utama dari WebGIS ini?

- ☐ Masyarakat umum
- ☐ Pemerintah
- ☒ Perusahaan
- ☐ Peneliti
- ☒ Internal organisasi
- ☐ Lainnya:

4. Data yang Digunakan

Data spasial atau non spasial apa yang digunakan?

Open-source satellite imagery, dummy plantation boundary, agricultural inputs information, and infrastructure data.

5. Fitur yang Ingin Dibuat

Ceklist fitur yang ingin diimplementasikan:

- Businesses analytics
- Crop monitoring
- Agricultural inputs
- Harvesting
- Areal Management
- Data Management

6. Referensi Tampilan / Inspirasi

[OneSoil](#), [EOS Data Analytics](#), [Agremo](#)

7. Output Akhir yang Diharapkan

Diharapkan dapat menjadi **portofolio pribadi** dan **prototipe startup** di masa mendatang.
